# NOTICE

## THE WAY OUR FRUIT TREES ARE GRADED

Long experience has shown that there is only one way to grade fruit trees exactly; that is by both diameter and height. Trees are not always proportioned correctly. A tree may have a required diameter yet be so short as to be almost useless. Trees may have a required height but be so thin that they cannot grow successfully. Our trees are graded by diameter and height also. You are assured that you will get a full sized tree.

## OUR OBLIGATION

Every customer is entitled to receive in good condition, sound, healthy trees or plants of the size, age and variety for which he pays. The successful growth of trees and plants after delivered to customers in good condition, depends almost entirely on conditions of soil, weather and after-care, all of which are beyond our control. If any stock fails to grow, we help share the loss with our customers by replacing at one-half of the original purchase price.

We pay packing and shipping charges on all orders excepting those of less than Ten Dollars that are shipped direct to customer.

## STANDARD APPLES

The Apple is the King of Fruits. An orchard or even a single tree is a good investment and will increase the value of your property as time goes on.

## CORTLAND OR IMPROVED McINTOSH

A large apple of the Snow type, keeping until February, perfumed, tender, and very delicious. Color, a bright deep red. LARGER SIZE, BETTER KEEPER, THAN McINTOSH. Tree strong, bears young and is a reliable cropper. We have a very limited number of this variety as true cions are very difficult to procure. All our trees are from the original strain.

Cortland, Select Trees-----\$2.00 Each

## RED NORTHERN SPY

An improvement on the widely known Northern Spy. Dark Red all over. Much better than the original for market purposes. Exactly like the Northern Spy in every other way.

Red Northern Spy, Select Trees-----\$2.00 Each

Hyslop

Whitney

Red, late, excellent      Large, extra good  
for jelly.

Martha

Bears young, good for eating or cooking.

We cannot supply the Transcendent. It grows very well in the nursery row but blights so badly in the orchard that it does not pay to plant.

## STANDARD PEARS

Require little care and make big returns. Good trees for the home orchard. The fruit sweet and full of flavor is unequaled for jellies, desserts, canning and cider.

## DWARF FRUITS

For the garden or small yard where standard trees take too much space, dwarfs should be planted. They require the same care as standard trees but bear young, have low, broad heads. Fruit is easily picked. They can be planted 10 to 12 feet apart. Do not order varieties not listed below. We do not carry them.

## CONIFEROUS EVERGREENS

No efforts have been spared to make these evergreens the best that can be produced. They are grown in specially wide rows, root-pruned, and transplanted sufficiently to insure a good root system, and carefully trimmed to produce full even shapes and proper bushiness.

Trees listed below are individually selected from our stock and are well worth the price we ask for them.

Stock is balled and burlapped unless otherwise noted.

Rule: Multiply the distance in feet between the rows by the distance the plants are apart in the rows and the product will be the number of square feet for each plant or hill; which divided into the number of feet in an acre (43560) will give the number of trees to an acre.
